

Keyboarding Support

Knowing how to type is an important skill for being efficient in both school and the workplace. The Digital Zone is happy to provide free websites for you to learn home keys, muscle memory, and typing speed.

Learning the Home Keys

Home keys are where one places their fingers when learning to type. The home keys include F, D, S, and A on the left of the keyboard, and J, K, L, and ; (semicolon) on the right of the keyboard. Poising the fingers over home keys is good technique for typing. It makes finding keys without looking easier and faster.

Building Muscle Memory

When one uses the home keys, they can learn where all the keys are on a QWERTY keyboard without looking. Practicing typing without looking can take time, but eventually muscle memory will help improve speed. Good speed will develop naturally over time with practice.

Increasing Typing Speed

These games provide an entertaining way to work on typing speed. Some jobs for administrative roles ask for typing speed, which can be learned by doing the typing test at the last link.
